Roxana Stanescu

(425) 466-2478 | rstanz@uw.edu | LinkedIn | GitHub

Education

University of Washington — Seattle, WA
Bachelor of Science in Computer Science, GPA: 3.9 — *Expected June 2028*

Technical Skills

Languages: Java, Python, JavaScript/TypeScript, C, C#, Dart, SQL
Frameworks & Libraries: Spring Boot, React, Node.js, PyTorch, TensorFlow, .NET, Flutter
Cloud & Data: AWS (Lambda, SQS, SNS, EventBridge), Azure, Google Cloud, PostgreSQL, Firebase, Terraform, Jenkins, Dynatrace
Developer Tools: Git, GitHub, Atlassian Forge, Jira, Android Studio, DbVisualizer, VS Code
AI Tools & Workflows: GitHub Copilot, Claude Code, Cursor, prompt engineering, LLM API integration

Experience

Software Engineering Co-op — June 2026 – December 2026
Chewy, Inbound Technology & Supply Chain — *Bellevue, WA*

- Built a chargeback email simulation feature (**Java/Spring Boot**, **React**) that renders generated notices for stakeholder review before send, catching errors ahead of irreversible vendor delivery.
- Designed and implemented **PostgreSQL** tables to track chargebacks end-to-end through the new workflow, giving compliance stakeholders a full audit trail where none previously existed.
- Led migration of chargeback email orchestration to a centralized notification platform and moved scheduling onto AWS EventBridge, cutting onboarding time for new compliance clients from 3 weeks to 1 week.

Undergraduate Machine Learning Researcher — September 2023 – Present
Seattle Children's Hospital, Department of Radiology — *Seattle, WA*

- Built PyTorch segmentation pipelines to automate stool burden detection in pediatric abdominal radiographs, benchmarking CNN (UNet++/EfficientNet) architectures across 735 annotated images.
- Improved validation Dice from 0.32 to 0.67 via resolution scaling and ensembling, selecting a CNN architecture.
- Built the preprocessing and evaluation pipeline; correlated model output against expert Leech/Likert ratings on 889 instances (Pearson r=0.61–0.64, $p<0.001$); deployed via a Hugging Face Gradio demo.

Projects

PAWS | *Next.js* — July 2026

- Built a Next.js app that calls an LLM over customer purchase history to surface personalized product recommendations.
- Placed 2nd in the Chewy AI Hackathon intern cohort; presented to 200+ attendees including the organization's VP and cross-functional teams.

Spendify | *Atlassian Forge, React, Node.js, Jira API, Rovo AI* — Oct. 2025

- Built a student financial tracking app on Jira using Atlassian Forge, supporting expense categorization, monthly spend visualization, and personalized budgeting insights.
- 2nd place in the Atlassian-sponsored track at DubHacks 2025 out of 40+ teams.
- Implemented an AI chatbot on Rovo AI that parses user spending history and returns tailored money-saving recommendations.

NOMM | *Dart, Flutter, Firebase, Android Studio* — Jan. 2025 – June 2025

- Built a full-stack social mobile app for discovering and reviewing restaurants, with friend groups, star ratings, and photo reviews plotted on an interactive map.
- Integrated Firebase Firestore and Auth for real-time data sync and user authentication across 1,000+ concurrent users.

Leadership

Forgotten Faces Foundation — September 2020 – Present
Student Leader — *Seattle, WA*

- Directed a student-led nonprofit supporting under-served children in rural Romania; raised over $20,000 and coordinated a team of 20+ volunteers.
- Managed fundraising and logistics to deliver clothing, school supplies, and educational trips to 200+ children annually; recognized with national awards from the Romanian American Cultural Society (2023–2024).
- Fluent in Romanian (Washington State Seal of Biliteracy).
